Statistics Service

ACKNOWLEDGMENT

This report is made possible through a cooperative effort of the Florida Agricultural Statistics Service, USDA, and the Florida Department of Agriculture and Consumer Services.

Many agricultural producers, associated allied industries, and government agencies associated with the livestock industry voluntarily supplied basic data used to develop these statistics. Their contributions are sincerely appreciated.

FLORIDA CASH RECEIPTS SUMMARY

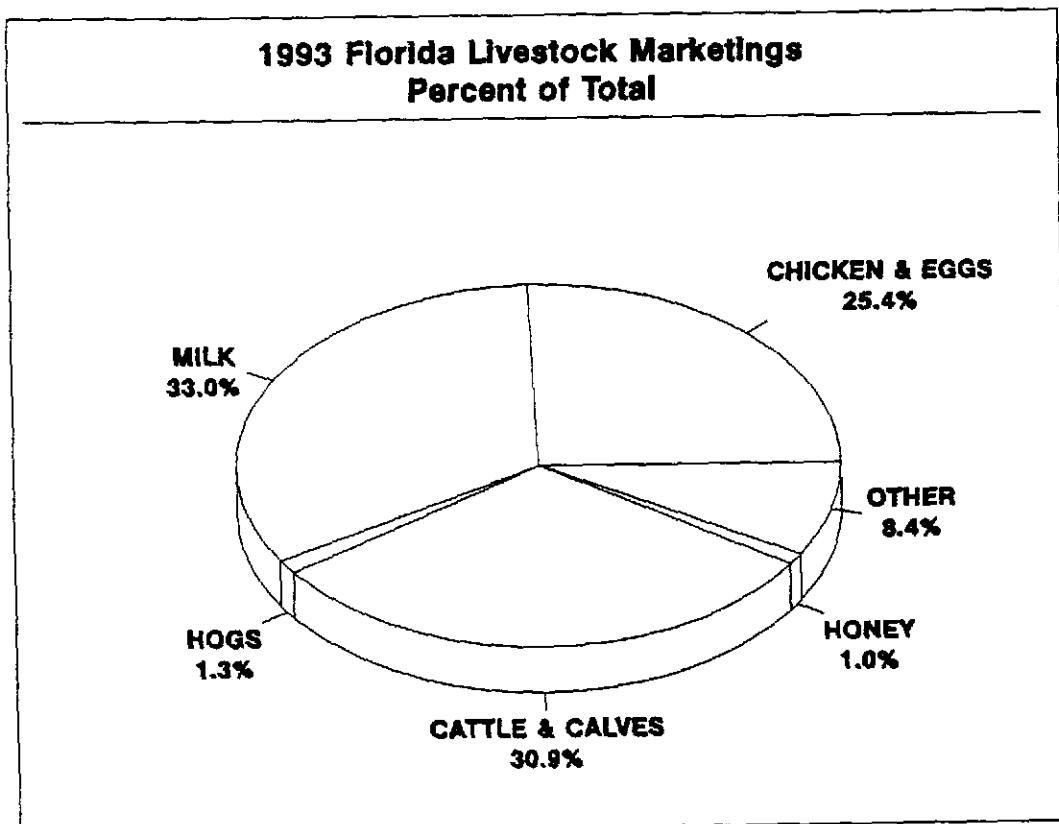

Florida's Livestock Industry contributed 1.171 billion dollars (20%) of the preliminary 5.919 billion dollars of gross farm receipts received by Florida agricultural producers in 1993. This represented an increase of 32 million dollars from 1992's livestock and livestock product marketings. Milk sales remains the largest contributor to gross receipts, a position held since 1989.

Chicken and Egg receipts showed an increase of 38 million dollars in 1993. Cattle receipts increased by 19 million

dollars and Hog receipts increased by 2 million dollars.

Milk receipts decreased by 16 million dollars and Honey receipts by 600,000 dollars.

The "Other" category decreased 12 million dollars in 1993. Included in "Other" are horses, goats, sheep, aquaculture products, and other categories not listed separately.

DAIRY SUMMARY

Florida dairies produced 2.558 billion pounds of milk in 1993. This was 21 million pounds less than the production of 2.579 billion pounds during 1992 and 50 million pounds greater than the production of 2.508 billion pounds during 1991.

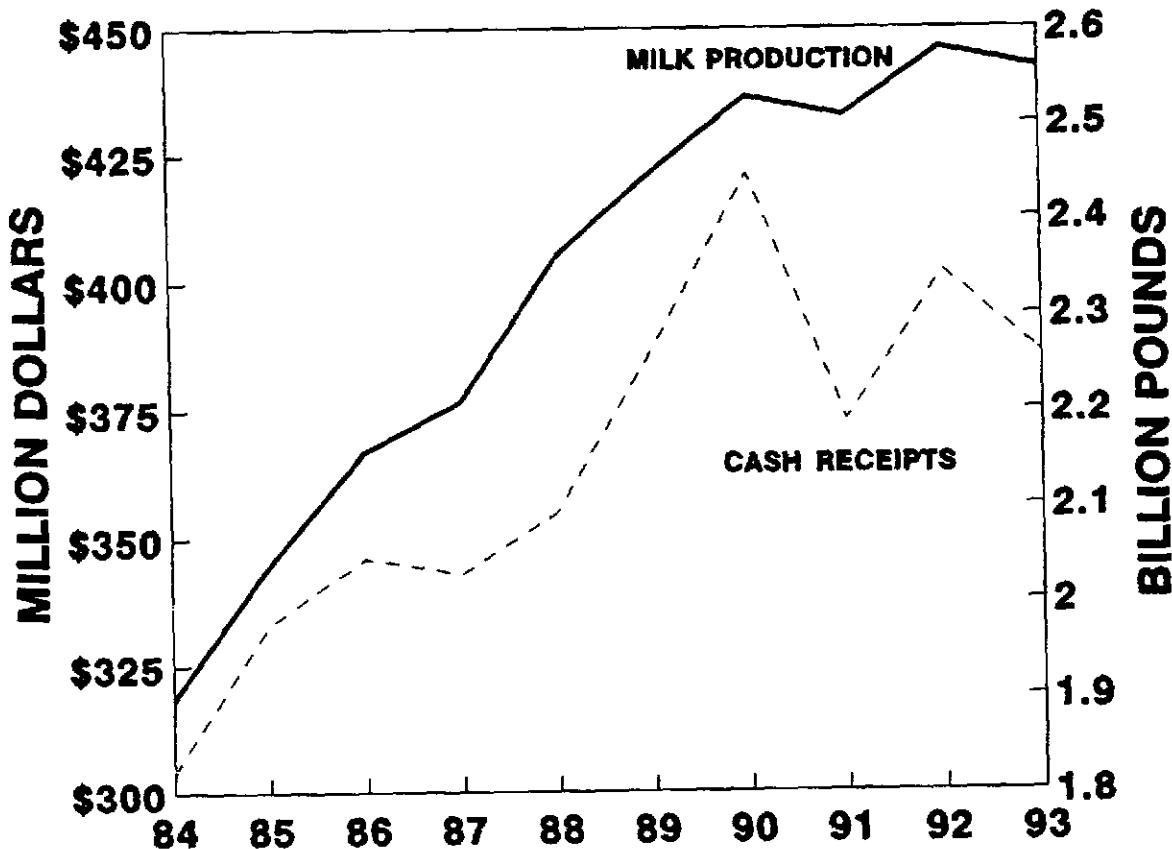

An average of 178,000 milk cows were on Florida farms and commercial dairies in 1993. This was 2 percent below the 1992 average. Compared to other States, Florida ranked 15th in average number of milk cows and 14th in total milk production.

Cash receipts from marketings of Florida milk in 1993 totaled 386 million dollars, 16 million less than 1992.

Total United States milk production was 150.9 billion pounds in 1993, compared to 151.6 billion pounds in 1992. During 1993, the number of milk cows on U. S. farms and dairies averaged 9,705,000, a 130,000 cow decline from 1992. Average annual milk production per cow was a record 15,554 pounds, 135 pounds higher than last year.

Nationwide, cash receipts from marketings of milk during 1993 totaled 19.3 billion dollars, a decrease of 3 percent from the 1992 total of 19.8 billion dollars. Production returns averaged \$12.96 per cwt, 29 cents less than 1992's average of \$13.25.

1993 COUNTY SUMMARY

Okeechobee County continues to produce almost three times as much milk as any other county in Florida. Six counties each produced over 100 million pounds of milk.

in 1993. Those counties (Okeechobee, Lafayette, Hardee, Gilchrist, Clay, and Highlands) accounted for 48 percent of the milk produced in Florida during 1993.

FLORIDA MILK PRODUCTION: Inventory of commercial milk cows and annual milk production by counties

CATTLE SUMMARY

CATTLE AND CALVES

All cattle and calves on Florida farms and ranches as of January 1, 1994, including dairy, totaled 1,980,000 head, up 2 percent from last year and 2 percent above January 1, 1992. Beef cows totaled 1,100,000 head, 3 percent above last year.

Calves born during 1993 totaled 1,020,000 head, 2 percent above last year. Florida ranked ninth in beef cows nationally, second in States east of the Mississippi River and is tied for fifteenth nationally in total cattle and calves. Florida ranked fifteenth in number of milk cows.

Feeder calves shipped out of Florida by truck from areas east and south of the Suwannee River during 1993 totaled over 576,000 head. Florida continued as the second leading calf marketing State nationally.

Based upon the fifth cattle and calves county estimates prepared by the Florida Agricultural Statistics Service, Okeechobee is the leading cattle county in the State--ranking first in total cattle, first in dairy cows and tied for fourth with Polk County in number of beef cows. Hendry, Highlands, and Osceola are the top three counties in number of beef cows.

CATTLE SURVEY METHODOLOGY

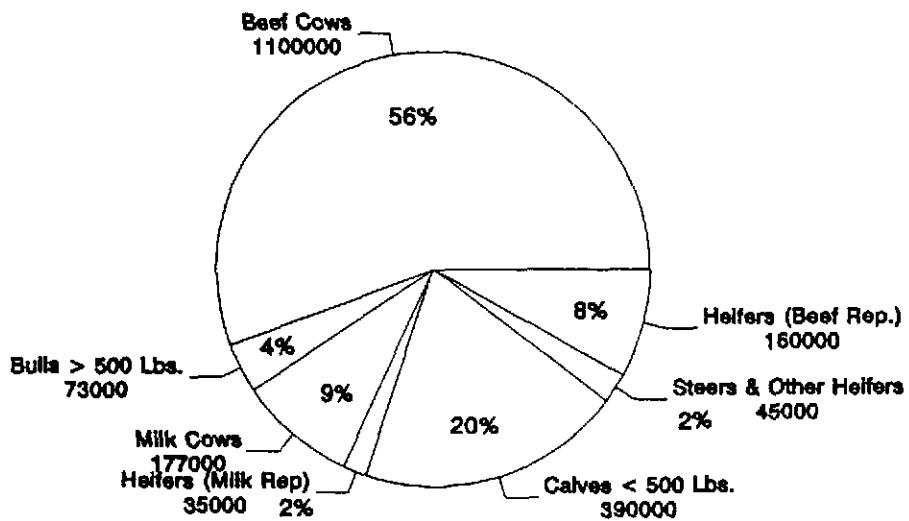

Primary data used in making cattle inventory estimates in this summary were obtained from probability surveys. Nationally, these surveys include information from a sample of about 66,000 farming operations. Information is collected

by mail, telephone, and personal interviews. Since all operations with cattle are not included in the sample, survey estimates are subject to sampling variability. This variability, as measured by the relative standard error, is about one and one-half percent at the national level for cattle inventory. This means that chances are approximately 95 out of 100 that a survey estimate will be within 3 percent of the complete coverage value if the same procedures were used to survey all producers. In Florida, nearly 1,400 cattle producers were surveyed with most of the large farms and ranches included in the count. As would be expected, the relative standard error for Florida and other States is greater than at the national level because of the smaller number of farms in the State samples.

Survey estimates are also subject to non-sampling errors such as omissions, duplications, and mistakes in reporting, recording, and processing the data. These errors cannot be measured directly, but they are minimized through rigid quality controls in the data collection process and a careful review of all reported data. In setting the inventory estimates, survey information on births and deaths is used as well as inventory numbers. The survey results are combined with reliable data from other sources for slaughter, imports, and exports to construct national and State balance sheets, which provide an additional check on survey inventory estimates.

County estimates were made possible by supplementing the State survey sample. Information from over 8,000 ranches and farms were utilized in preparing the county level statistics.

POULTRY AND EGG SUMMARY

VALUE

Florida egg production was valued at \$106.8 million, up 17 percent from the previous year. The average annual price for eggs was 51.8 cents per dozen, 5.1 cents more than in 1992.

The value of broilers produced in Florida during 1993 totaled \$187.7 million, an increase of 14 percent from a year earlier. Prices of broilers in 1993 averaged 34.0 cents per pound, an increase of 3.5 cents per pound from 1992.

The value of sales from Florida chickens (excluding broilers) was \$3.6 million, up 20 percent from a year earlier. Prices during 1993 averaged 10.3 cents per pound, compared to 9.7 cents per pound in 1992.

INVENTORY

Broilers raised during 1993 totaled a record high 128.4 million birds, up 2 percent from 1992. The average number

of layers during 1993 was 9.6 million, up 2.0 percent from the previous year.

PRODUCTION

Florida broiler production in 1993 totaled a record high 552.1 million pounds, up 2.0 percent from 1992. Average bird size, at 4.3 pounds, was unchanged from a year earlier.

Egg production totaled 2,475 million, up 5.7 percent from 1992. Eggs per layer averaged 258 during 1993, up 3.6 percent from 1992.

Commercial hatcheries produced 173.4 million straight run chicks in 1993, up 5.3 percent from 1992. Broiler-type chicks accounted for 89 percent, and egg-type 11 percent of the total eggs hatched.

TERMS AND DEFINITIONS

BROILERS are meat-type chickens raised commercially and usually marketed around 7 weeks of age.

EGGS include both table and hatching eggs. Market egg prices are calculated on a farm basis, cases exchanged. They include all grades and sizes, but exclude charges for hauling, grading or packaging. Prices for hatching eggs are not published separately. Annual egg production, price, and value statistics are for table and hatching eggs combined.

OTHER POULTRY cash receipts include chickens other than broilers, turkeys, and miscellaneous farm poultry.

CURRENT YEAR data are preliminary and subject to revision.

SURVEY METHODOLOGY--Estimates for hens and pullets of laying age, pullets not yet of laying age, and of egg production are based upon data obtained from a sample of commercial chicken and egg producers. This sample is selected from the universe of Florida poultry management units, and includes approximately 98 percent of the total commercial laying flock.

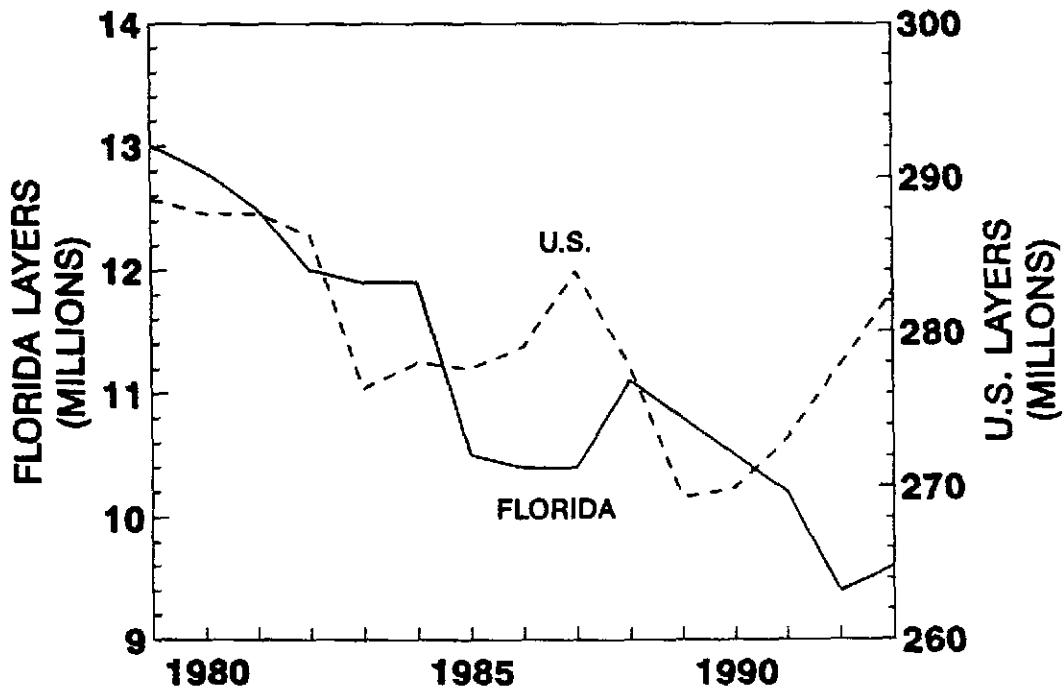

During December of each year all known commercial egg producers in Florida are contacted. This complete enumeration establishes the annual universe of management units. Management units include all independent producers as well as contractors who report for all contractees.

1/ 1984-93 data are on pages 76 and 78 for hogs and pigs. 2/ Inventory as of January 1 prior to 1965 and as of December 1 preceding year beginning in 1965.

HONEY

FLORIDA: Honey production for 1993, at 22,600,000 pounds, decreased 1 percent from the 1992 production of 22,880,000 pounds, and put Florida third only to California and South Dakota for amount produced during the year. Although the number of colonies dropped 20,000 from the 1992 number, the yield of 113 pounds per colony was up 9 pounds.

Producers received an average of 51 cents per pound. Value of the 1993 crop decreased from \$12,126,000 the previous year, to \$11,526,000, a 5 percent loss.

UNITED STATES: Honey production in 1993 from producers with five or more colonies totaled 230 million pounds, up 4 percent from 1992. There were 2.88 million colonies producing honey in 1993, compared with 3.03 million in

1992. Yield per colony averaged 80.1 pounds, up 7.3 pounds from the 72.8 pounds in 1992. Colonies that produced in more than one State were counted in each State and yield may be understated. Producer honey stocks were 49.1 million pounds on December 15, 1993, up 26 percent from a year earlier.

Prices for the 1993 crop averaged 54.4 cents per pound, down 1 percent from the 1992 price of 55.06 cents per pound. Prices are based on retail sales by producers and sales to private processors and co-ops. At the U. S. level, prices for each color are derived by weighting State average prices by the State quantities sold. Government payments are excluded from the honey prices published in this report. Lower prices received for water white and extra light amber resulted in the lower price for all honey in 1993.

BEE AND HONEY: Number of colonies, production and value, Florida and United States 1988-93

CONFIDENTIALITY OF COLLECTED DATA

All information collected from individual agricultural producers is held strictly confidential. Data provided by individual producers or other agricultural firms are used only to compile and publish statistics at the county, State, and national levels. Statistics at the county and State level are not published if they will potentially disclose information about an individual or operation. In addition, all names and addresses obtained by this office are held confidential.

RELEASE DISTRIBUTION POLICY

Florida Agricultural Statistics Service (FASS) publications are provided free of charge to all Florida agricultural producers and other respondents to FASS surveys. Also entitled to free FASS publications are news media that use agricultural statistics in their publications, cooperating State agencies, and other USDA agencies that have an essential need for this information. Publications picked up at the FASS office will be provided at no charge.

Other persons or entities will be assessed a nominal charge to receive individual publications or to be placed on distribution list for future FASS publications.
